

1. Solve by factoring.

Solve the equation by factoring. Show the zero-product step and check your solutions.

$$2x^2 + 5x - 3 = 0.$$

2. Solve with the quadratic formula.

Consider the equation

$$3x^2 - 6x - 1 = 0.$$

- (a) Find the discriminant. State the number and type of solutions.
- (b) Solve using the quadratic formula. Give exact answers.
